

You need:

- pencil
- ruler
- protractor

Angle estimation game

 A game for 2

- Decide who is Player A and who is Player B.
- Player A draws an angle.
- Player B estimates the size of the angle.
- Both players then measure the angle using a protractor and agree the size of the angle.
- Player's B score is the difference between their estimate and the actual size of the angle.
- Repeat reversing roles.
- After 6 rounds each player finds the total of their scores.
- The winner is the player with the smaller total.
