

Activity 5:

Future firefighter design ideas

Use the outlined artwork of a firefighter to add and combine your IOT "devices". Feel free to add colour, adapt or change. What will your new design/system look like? Remember to solve all of the requirements from the user needs you stated in activity 4. Use annotation to explain your ideas and make sure you include how the IOT can help. Complete as many design sheets as you wish, however everyone in your group should have one. Use all of your design idea sheets then create one final, developed design. What do you think of it?
